

# Amalgam

We help people create extraordinary things using our extensive workshop and diverse group of makers, designers and creative thinkers

**“A brilliant piece of software that fits all our needs. Easy to use, super fast to edit files and unbelievably reliable. Spaceclaim is an all rounder program that fits many uses”**

**Lewis Jefferies, CAD Designer – Amalgam  
Modelmaking**

## CASE STUDY

### Goals/Challenges/Requirements

- Spaceclaim is well priced and an all rounder CAD program
- We require a CAD program that can open many different forms, lightweight and quick to edit files
- Spaceclaim is easy to use and pick up, meaning more people have started to use the program within the company.
- Solidworks was too complicated and Rhino is too unstable, hence why we use Spaceclaim.
- Importing files, editing supplied CAD, combining bodies, design for prototyping, reverse engineering, general design build, exporting for 3D printing

### Results

- More employees are using the same program which makes it easier than switching between software.
- CAD editing has been quicker and easier than before
- With the surface modelling flexibility, we have been able to edit files that in the past we would have struggled with.
- We have reduced our SolidWorks licences as a result of using more Spaceclaim.

### Working with Us

- We have been using the program for over 6 years and within the years added a few extra licences.
- The support we get is great and very supportive. Always happy to help.
